Software engineer with 6 years of experience building web applications using React, Node.js, and the MERN stack. Co-founded a profitable cloud-based School Information System live in production and on track for national expansion; engineered an e-voting platform that has run every student council election at Aga Khan High School Kampala since 2022. Together, these systems serve 1,000+ students.

EDUCATION

Baylor University

Bachelor of Science in Computer Science — Waco, TX

Expected: May 2029

GPA: 3.51 / 4.00

Relevant Coursework: Introduction to Computer Science I & II (C++), Discrete Mathematics

TECHNICAL SKILLS

Languages: JavaScript, Python, C++, HTML, CSS

Frameworks & Libraries: React.js, Node.js, Express.js, NestJS, Prisma, Tailwind CSS, Material UI, Bootstrap, PyTorch

Databases: MongoDB, Supabase, PostgreSQL

Developer Tools: Git, GitHub, Figma, VSCode, Arduino, REST APIs

EXPERIENCE & LEADERSHIP

Videra Digital Ltd

Co-Founder & Lead Frontend Engineer — SaaS company building data management ecosystems

May 2025 – Present

Kampala, Uganda

- Manage a team of 2 developers, 1 UI/UX designer, and a Head of Finance, establishing contribution structures and workflows that keep the team shipping consistently.
- Architect and maintain the entire frontend codebase across all Videra products, ensuring pixel-perfect, fully responsive implementations.
- Following the backend engineer's unexpected departure, independently learned NestJS, Prisma, and Supabase within two weeks and delivered a critical feature on schedule, ensuring a client commitment was met without delay.
- Drive all product direction, technical strategy, and company roadmap as co-founder; own all marketing and public-facing communications across LinkedIn and Instagram, building brand presence from scratch.

VoteAble

Founder & CEO — Cloud-based electronic voting platform for schools

July 2022 – Present

Kampala, Uganda

- Built and scaled a cross-functional team comprising a COO, CMO, CFO, UI/UX designer, and volunteer media team, coordinating all operations as a self-funded student-led venture.
- Compressed Aga Khan High School Kampala's election cycle from one month to one week; platform has successfully run every student council election since 2022 and draws 2,000+ monthly visits during election season.
- Founded a self-sustaining Legacy Team, a structured pipeline of International Baccalaureate (IB) students recruited and mentored to steward VoteAble's operations after graduation, so the platform endures for future cohorts.

UpLift Establishment Limited

Frontend Web Developer

April 2023 – September 2023

Mukono, Uganda

- Designed and shipped a fully responsive website from scratch; overhauled UI navigation and produced dynamic media galleries that strengthened the company's digital brand presence.

PROJECTS

Cadera — Cloud School Information System · cadera.app

React, NestJS, Prisma, Supabase (PostgreSQL)

- Originally contracted by Makarios Junior School; pivoted into a multi-tenant SaaS platform after recognising broader market potential. MVP delivered by a team of 2 developers and 1 UI/UX designer in 6 months.
- Centralises gradebooks, report card generation, attendance tracking, real-time analytics, and full student records for African schools; role-based access for admins, head teachers, and class teachers, with exportable PDF report cards.
- Currently live in production; architected to scale across East Africa and the continent entire.

VoteAble — Electronic Voting Platform · voteable.live

React, Node.js, Express.js, MongoDB, Render

- Full-featured e-voting platform managing the student council electoral process end-to-end: candidate registration with profile photos, live real-time results, and print-ready result sheets on election day.
- Features double-vote prevention, mobile-responsive design, and per-candidate profile views so students vote for a face, not merely a name on a Google Form.
- Built with security at its core after personally identifying and exploiting vulnerabilities in the school's prior system via browser inspection, every gap found was closed.
